Formed to answer the needs of the Veterinary and Agricultural Industry, Nettex has been researching, developing and manufacturing innovative solutions for nutrition and animal husbandry in the UK since 1983. This includes Nettex's patented Rapid Absorption Collate Technology.

Today we research, manufacture and formulate a wide range of products at a technologically advanced site in Rochester. Nettex supply a range of markets including agricultural, equine and poultry.

Our commitment to research and development means the products we make are of the highest quality and are tailored to meet the needs of customers in both the UK and in over 40 countries worldwide.

We believe in helpful and friendly personal contact and that only a professional field sales force, with extensive background knowledge and experience can offer truly practical advice.

Nettex's dedicated team of area business managers have over 30 years of experience within the agricultural sector. This, teamed with technical support, ensures our customers get the best out of our products.

Product Development

If you need advice on developing new products - no matter what the marketplace - our highly experienced technical advisers can help you get started. Similarly, our technical service can help with specific guidance and advice on existing formulations and on new product launches.

Animal Health

Our continual and daily contact with livestock producers means we hold a unique place in animal health technology and new product innovation. Our product development doesn't just use the very latest equipment and production methods, it's directed by the needs of livestock farmers themselves - and it's that close liaison between farmers and Nettex that makes our products effective.

To talk with our team of experts, please call +44 (0)1634 257 150

Quality assurance plays a key role in Nettex's philosophy, and all products are manufactured to the highest standards in accordance with our ISO 9001 and FEMAS accreditations.

NA COLLA

COLLATE ABSORPTION TECHNOLOGY

Many Nettex cattle and sheep nutrition products benefit from a patented manufacturing process: **COLLATE ABSORPTION TECHNOLOGY.**

This innovative technology allows a range of essential nutrients to be bonded to the rapidly absorbed energy base. As a result, nutrient uptake is accelerated in the animal ensuring ruminant livestock fed Collate products receive a surge of energy and nutrition shortly after administration.

The highly available energy source in these products becomes an extremely effective carrier of vitamins, amino acids and minerals - allowing these vital supplementary nutrients to be absorbed much more quickly into the bloodstream. Trials have shown that 50% are absorbed into the blood within 30 minutes of feeding to the animal.

Products carrying the **COLLATE** mark of distinction deliver essential energy and other nutrients to where they are needed most - and fast!

SHEEP

SHEEP NUTRITION (Ewe)

Multi Lamb Rapid

Gets ewes up and feeding within hours!

Multi Lamb Rapid is a fast working, high energy nutritional complex for ewes carrying multiple lambs. A 45ml feed will help rebalance a ewe's energy and nutritional needs FAST. Exhausted ewes can be fully recovered within a few hours.

- When it is cold and wet and there is little energy and goodness in grass and forage, ewes will transfer their bodily reserves into their lambs
- The result of this is the condition twin lamb disease
- Ewes suffering from twin lamb disease, and the lambs they are carrying, are at high risk of death
- Ewes can be fed successfully with fast acting, easy to administer Multi Lamb Rapid

Contains: Propan 1, 2 diol, cane molasses, amino acids, vitamins and minerals.

Administer: 45ml

Sizes available: 6 x 225ml (5 feeds) (Code 0200) | 6 x 495ml (11 feeds) (Code 0201)

Features	Advantages	Benefits
Collate absorption technology	Energy & nutrition rapidly absorbed into the bloodstream	Helps minimise waste and maximise effect
Propylene glycol (glucose pre-cursor)	Rapid improvement in energy status	Helps support reduced fat mobilisation, aiding recovery from twin lamb disease
Cane molasses	Rapidly fermentable, palatable energy source	Elevates blood glucose Easy administration
Nicotinamide	Supports liver function	Helps support liver recovery
Vitamin E & Selenium	Helps support muscle integrity Helps support immune response	Helps support immune response
Methionine	Helps increase supply of first limiting amino acid for milk production	Helps promote milky ewes

Ewe Boost

A fast-acting energy supplement for weak and at risk ewes.

Specifically formulated for ewes suffering from lambing exhaustion, Ewe Boost helps deliver energy and other nutrients quickly. It is also rich in thiamine and iodine.

Contains: Propan 1, 2 diol, cane molasses, amino acids, vitamins and minerals.

Administer: 25ml

Size available: 6 x 100ml (4 feeds) (Code 0649)

Twin Lamb Solution

Twin Lamb Solution is a fast working, energy complex for ewes carrying multiple lambs.

A 45ml feed will help provide a ewe with the energy she requires quickly. Exhausted ewes can show improvement in only a few hours.

Contains: Propan 1, 2 diol, cane molasses, amino acids, vitamins and minerals.

Administer: 45ml

Size available: 6 x 450ml (10 feeds) (Code 3767)

SHEEP NUTRITION (Lamb)

Lamb-Defence

Colostrum and egg protein for comprehensive support of new-born lambs.

Lamb-Defence is formulated with colostrum, egg protein and trace elements to support lambs in the critical first few days of life.

- New born lambs are extremely susceptible to bacterial infections caused by unfavourable bacteria
- Colostrum is essential for immune development
- The addition of protein and energy contained in Lamb-Defence will help support vigourous suckling from birth

Contains: Coconut oil, corn oil, egg protein, dried bovine colostrum, whey protein.

Administer: 2ml orally

Sizes available: 6 x 100ml (50 lamb feeds) (Code 0685)

of	PE COLINGO
AME	- DEFENCE

Features	Advantages	Benefits
Collate absorption technology	Energy & nutrition rapidly absorbed into the bloodstream	Helps minimise waste and maximise effect
Concentrated, digestible energy	Available energy when most needed	Helps support active, suckling lambs
Colostrum	Helps support immune development	Helps support lamb health/survival
Egg protein	Quality soucre of protein	Helps support lamb health/survival
Vitamins A,D, E	Immune supporting vitamins	Helps support lamb health/survival

Lamb Kick-Start

A rapid energy boost for small, weak and growing lambs.

Lamb Kick-Start is a fast acting energy source for the elevation of blood glucose levels in weak lambs. The addition of key ingredients in this supplement ensures it is especially formulated to support lambs in the critical first few days of life.

- Lambs are born with just enough energy to stand and suckle, but this energy runs out quickly
- Lambs that don't get up and suckle are at risk from hypothermia and death
- Easy to administer Lamb Kick-Start supports fading lambs to feed fast

Contains: Propan 1, 2 diol, cane molasses, amino acids, vitamins and minerals.

Administer: 4ml orally

Sizes available: 6 x 100ml (25 lamb feeds) (Code 0650)

Features	Advantages	Benefits
Collate absorption technology	Energy & nutrition rapidly absorbed into the bloodstream	Helps minimise waste and maximise effect
Propylene glycol (glucose pre-cursor)	Rapid improvement in energy status	Helps support lamb survival
Cane molasses	Rapidly fermentable, palatable energy source	Elevates blood glucose Easy administration
Selenium	Essential for muscle integrity	Helps support healthy muscle growth
Vitamin E	Antioxidant activity	Helps support immune development

THE IMPORTANCE OF LAMB COLOSTRUM

UK Lamb Losses

Industry standards suggest that the level of annual lamb losses on lowland farms in the UK is in the region of 15%. Losses in hill flocks are estimated to be lower than this as lowland and upland flocks tend to produce larger litters. Most losses tend to occur during pregnancy or in the first few weeks of life. This was seen in a HCC survey conducted on 70 flocks in Wales during the 2010-11 breeding season, where farmers were asked to record every loss. The losses seen during that season were less than industry standards and the majority were incurred either before lambing or in the period immediately after lambing. Overall, 30% of losses were shown to occur between scanning and lambing, and 49% at lambing (0-48 hours).

The major causes of lamb death are:

- Abortion and stillbirths
- Exposure and starvation
- Infectious diseases
- Congenital defects
- Predators and misadventure

Many more lambs could survive with correct pre-lambing ewe nutrition, better planning, good preparation, and well-organised lambing routines and facilities. Also, good stockmanship, possibly increased supervision and staffing numbers around lambing time and the early recognition of problem lambs.

Underfed ewes will direct their energy to trying to maintain their own body condition. Consequently, they will produce small lambs and will not have enough colostrum for the newborn lamb.

Best Practice Colostrum Management

Newborn lambs have limited energy reserves and require rapid access to colostrum to maintain homeostasis in order to survive. Colostrum provides not only a rich energy source, but also vital immunoglobulins. Lambs (and calves) are born agammaglobulinemic, ie they have no circulating antiodies (also known as immunoglobulins), IgG or IgM. This is because of the way the placenta is formed in domestic large animals. It essentially separates the maternal and foetal blood supplies, preventing the transmission of immunoglobulins in utero.

Newborn lambs are therefore dependent on ingesting and absorbing adequate amounts of colostral immunoglobulins or antibodies (IgG) from their mother's colostrum. This transfer of antibodies via the first milk is known as passive immunity. Without the protection afforded by passive immunity the lamb is at a vastly increased risk of succumbing to many bacterial diseases.

There are three golden rules to colostrum feeding:

- Quality
- Quantity
- Quickly

Colostrum antibody production is dependent on the ewe being adequately fed and supplemented in late pregnancy. Transport of immunoglobulin from the blood serum to the mammary gland begins several weeks before parturition and reaches a peak a few days before parturition. High quality colostrum contains 50g/L or more of immunoglobulin-G (lgG). Any reduction in the level of lgG in colostrum can mean the difference between successful passive transfer and failure of passive transfer.

Older ewes will often produce better quality colostrum than younger ewes. However, if ewes have not been exposed to many pathogens the colostrum produced may not have high levels of antibodies. The type of antibodies in colostrum depends on the antigens to which the ewe has being exposed, either from exposure to disease or vaccination. For example, a broad-spectrum clostridial disease/pasteurella vaccine should be administered to ewes four to six weeks pre-lambing as an aid to control of these diseases in their lambs. Ewes raised on a farm produce antibodies specific to that farm.

The standard rule of thumb for lamb colostrum intake is 250ml/kg bodyweight. However, Dr John Vipond (SAC sheep specialist) explains that the amount of colostrum needed to protect a new-born lamb against infection is less than that needed to prevent hypothermia. For disease prevention, lambs need about 60ml per kg birth weight as the first protein feed after birth, with another 60ml within six hours. But to prevent hypothermia twin lambs born outside would need a total of about 210ml/kg in the first 18 hours. That adds up to about 1,100ml for a 4.0kg twin outside.

Ewe body condition has a huge influence on colostrum production. Farmers must be vigilant. If colostrum is in short supply try to provide all lambs with some maternal colostrum to give an amount of passive immunity and use a high quality colostrum supplement to top up. First parity sheep are often a bit short of colostrum for twins, and a study by McNeil demonstrated that 30% of twinbearing ewes fail to produce adequate colostrum for their lambs. Surprisingly, the same study showed that 10% of singles failed to produce sufficient colostrum. Good quality colostrum can be harvested from single bearing ewes to

provide supplementary feeds for triplets. Cow colostrum can also be utilised.

Colostrum from other ewes, cows or colostrum supplements can be administered by two methods: suckling from a bottle or via a stomach tube.

Colostrum Supplements

There are, however, easy-to-store and use convenient alternatives in the form of colostrum replacers and supplements, such as those available from Nettex. These products are a wise investment and will save lives. When it comes to colostrum alternatives you get what you pay for. There will be several components present in some supplements that will allow identification of a high quality product. The ultimate aim of any colostrum supplement is to mimic the ewe's colostrum in every way possible.

In the absence of sufficient colostrum, the temptation is often to simply use a milk replacer. This is a false economy. Colostrum differs substantially in its makeup from ewe and cow milk replacers, not only in the fact that it contains immunogloblins (IgG), but also because it contains a significantly higher fat and protein content.

Something that should instantly stand out in a colostrum supplement is its fat content. A good quality product will contain highly digestible forms of fat that are vital for supplying much needed energy, to aid protection from hypothermia. The protein content should also be taken into consideration. The total protein content of the colostrum will be from several sources, the most important being dried colostrum, which contains bovine proteins.

In addition to the bovine proteins contained in the dried colostrum, well formulated colostrums will also contain egg protein.

Another additional factor worthy of consideration is the inclusion of pre and probiotics. Studies have found that in young pre-ruminants bacterial probiotics such as lactic acid bacteria generally target the small intestine and stabilise gut microflora to limit the risk of pathogen colonisation. Live yeasts given soon after birth have also been reported to favour microbial colonisation in the rumen. These are often hard to identify on product labels though, look for a declaration under micro-organisms.

A colostrum should also be easy mixing and produce a product that is smooth and creamy in consistency. This is important, firstly from a practical point of view in terms of easy handling and feeding, but secondly from a technical point of view. The bovine proteins in colostrum are temperature sensitive. If a product cannot be quickly and easily mixed using only warm water there is danger that any benefits from the inclusion of dried colostrum may be lost.

Lastly, it is imperative that lambs receive colostrum or alternatives as quickly as possible, just as you would with maternal colostrum. This is because at birth lambs are able to absorb large proteins through the intestine wall into the blood stream, however, from the moment it is born the lamb's ability to do this is decreasing.

Minimising losses from disease post lambing through correct colostrum management is absolutely crucial in maintaining the profitability of the sheep farming business, and feeding high quality colostrum will definitely save lives.

LAMB COLOSTRUMS

Features, advantages and benefits of Nettex Collate Lamb Colostrums

Features	Advantages	Benefits
Collate absorption technology	Energy & nutrition rapidly absorbed into the bloodstream	Helps minimise waste and maximise effect
Dried bovine colostrum	High bovine protein content	Helps support immune development
Egg protein	Quality source of protein	Helps support lamb health/survival
Easy mixing technology	Smooth consistent product	Easy to administer
Pre / pro biotic	Helps support healthy gut development and function	Helps support lamb health

Whole Colostrum for Lambs

Easy to mix and easily absorbed palatable formulation.

A colostrum blend, targeted for the larger breed, providing energy and support to newborn lambs.

Feed when no or insufficient maternal colostrum is available, specially formulated Whole Colostrum for Lambs contains more energy and protein than other colostrum supplements.

Contains: Concentrated bovine colostrum (from Johne's, IBR and EBL free herds), whey protein powder, coconut oil, hydrolysed wheat protein, egg protein, vitamins and minerals.

Administer: 40g in 100ml of water

Sizes available: 1 x 400g (10 x 40g sachets, 10 lamb feeds) (Code 0548) |

4 x 500g (12 lamb feeds) (Code 0785)

High quality, easy-mix first day colostrum formulated with ewe's milk to provide energy and support to weak and small lambs.

Ultra Concentrate mimics the ewe's own colostrum in every way possible and should be used when no or insufficient maternal colostrum is available.

Contains: Concentrated bovine colostrum (from Johne's, IBR and EBL free herds), ewe whey protein, coconut oil, hydrolysed wheat protein, egg protein, vitamins and minerals.

Administer: 25g in 80ml of water

Sizes available: 1 x 250g (10x25g sachets) (Code 0425) | 4 x 250g (10 lamb feeds) (Code 0849) | 4 x 500g (20 lamb feeds) (Code 0407) | 1 x 1kg (40 lamb feeds)

(Code 0424) | 1 x 2.5kg (100 lamb feeds) (Code 2162)

TRA CONCENTRAT

Lamb Colostrum

An easy mix colostrum blend sourced from Johne's, IBR and EBL free herds.

Formulated for new-born lambs to provide nutritional, energy and health support when no or insufficient maternal colostrum is available. Lamb Colostrum provides energy protein and probiotics to support health and growth.

Contains: Concentrated bovine colostrum (from Johne's, IBR and EBL free herds), Whey protein powder, coconut oil, hydrolysed wheat protein, egg protein.

Administer: 25g in 80ml of water

Sizes available: 4 x 250g (10 lamb feeds) (Code 4774) | 4 x 500g (20 lamb feeds) (Code 4775) | 1 x 1kg (40 lamb feeds) (Code 4776) | 1 x 2.5kg (100 lamb feeds) (Code 3826)

SHEEP VITAMIN & MINERAL SUPPLEMENTS

Sheep Conditioning Drench

Packed with nutrition, Sheep Conditioning Drench is a high quality, high specification vitamin and mineral drench.

Sheep Conditioning Drench is formulated for use in ewes, rams and lambs and is ideal for use at critical points in the year to help ensure animals are in the best condition possible.

Nettex drenches all contain Collate technology.

This technology utilises a fast working energy carrier system that delivers optimum nutritional value when it is most required. Providing nutritional value into the bloodstream maximisng effect and minimising waste to provide maximum profitability.

Nettex Sheep Conditioning Drench is available with and without added copper.

Contains: Propan 1,2 diol, cane molasses, amino acids, vitamins and minerals.

Sizes available (without copper): 4 x 1 litre (Code 3490) | 4 x 2.5 litre backpack (Code 3491) | 1 x 5 litre backpack (Code 3507)

Sizes available (with copper): 4 x 2.5 litre backpack (Code 4626) | 1 x 5 litre backpack (Code 4627)

Ewes and Rams Pre Tupping - Administer: 15ml

Features	Advantages	Benefits
Cobalt	Helps influence egg and foetal development	Helps support lamb survival and vigour at birth
Vitamins A, D, E	Immune supporting vitamins	Helps support immune response
Vitamin B12	Aids carbohydrate metabolism	Helps support ewe body condition
Selenium and Zinc	Helps support daily sperm production	Helps support ram fertility

Ewes Pre Lambing - Administer: 15ml

Features	Advantages	Benefits
Vitamins A, D, E	Immune supporting vitamins	Helps support lamb immune response at birth
Cobalt and Selenium	Studies show lambs of ewes supplemented stand and suckle quicker	Helps support lamb vigour and survival
Chelated Zinc	Supports keratin production (found in hoof horn and hair/wool)	Helps supports maintenance of healthy feet and udder tissue
Vitamin B12	Essential for energy metabolism	Helps support ewe body condition

Lambs - Administer: 1-2 months 5ml, 3 months + 10ml

Features	Advantages	Benefits
Vitamins A, D, E	Immune supporting vitamins	Helps support lamb immune response
Cobalt	Essential for rumen production of Vitamin B12, required for energy production	Helps support lamb growth and development
Chelated Zinc	Supports keratin production (found in hoof horn and hair/wool)	Helps supports maintenance of healthy feet
Biotin	Essential for energy metabolism	Helps support feed conversion and lamb growth
lodine	Essential for maintaining good wool quality	Helps support good fleece quality (texture)
Vitamin B12	Essential for energy metabolism	Helps support feed conversion and lamb growth

Cobalt, Selenium & Vitamin B12 Drench

Unlock performance potential with this specific trace element and vitamin supplement for cattle and sheep.

 Large areas of the UK are cobalt and selenium deficient, practices such as liming and pasture improvement have exacerbated this situation

 Cobalt is essential for growth and development of young stock and has important implications in ruminant fertility

 Animals deficient in cobalt and selenium will substantially under perform

Cobalt, Selenium and Vitamin B12
 Drench also contains additional vitamins A, D, E and B1 for added performance potential

Contains: Propan 1,2-diol, cane molasses, amino acids, vitamins and minerals.

Administer: Lambs: 6-12 weeks, 1ml | 3-6 months, 2ml | mature, 5ml Administer: Calves: 4+ weeks, 5ml | yearlings, 10ml | mature, 15ml

Sizes available: 4 x 1 litre (Code 3495) 4 x 2.5 litre backpack (Code 3496)

1 x 5 litre backpack (Code 4761)

COB-I-SEL

A slow release 25-day cobalt supplement for finishing lambs that also delivers iodine, selenium and multi-vitamins.

COB-I-SEL 25 has been developed specifically to help maintain optimum cobalt levels in rapidly growing lambs finishing at grass and produce quality carcasses at finish. It's formulation also makes it ideal for targeted use during the ewe's production cycle e.g. pre-tupping or pre-lambing.

- The majority of UK grazing is cobalt deficient, particularly if it has been improved with practices such as liming
- Cobalt is required for rumen synthesis of vitamin B12 and vitamin B12 is required for energy production

- There is very little storage capacity in the body for cobalt and Vitamin B12, so the animal relies on a daily intake from feed, forage or grazing
- If forage or grazing is lacking in cobalt, animals become cobalt deficient very quickly, and may suffer from the resulting condition known as pine
- Pine will cause poor growth and wool quality in lambs resulting in small lambs with poor body condition. These lambs will take far longer to finish resulting in significantly increased days to slaughter and inferior carcass quality

Contains: Cobalt, Iodine, Selenium and multi vitamins.

Available with or without copper. Administer from five weeks of age.

Administer: Lambs 1 x micro bolus. Ewes 2 x micro bolus

Size available: 4 x 250 micro boluses with copper (Code 5453)

4 x 250 micro boluses without copper (Code 5782)

Lambs

Features	Advantages	Benefits
Cobalt	Supplies cobalt for rumen conversion to vitamin B12	Helps support live weight gain through to finishing
Selenium	Helps support optimum selenium levels	Helps support lamb carcass quality
lodine	Essential for maintaining good wool quality	Helps support good fleece quality (texture)
Vitamin B12	Essential for energy metabolism	Helps support feed conversion and lamb growth

Ewes

Features	Advantages	Benefits
Cobalt and Selenium	Lambs of ewes supplemented stand and suckle quicker	Helps support lamb vigour and survival
lodine	Supports energy metabolism	Helps support ewe body condition
Vitamin B12	Essential for energy metabolism	Helps support ewe body condition
Vitamin E	Immune supporting vitamin	Helps support natural defences

COB-I-SEL micro bolus applicator

A specially designed balling gun for the administration of Cob-I-Sel.

Single (Code 5485)

DO YOU FARM IN A COBALT DEFICIENT AREA?

NET TEX

LAMB FEEDING

Colostrum Feeder (includes bottle and orange latex tube)

- Combination pack includes orange surgical latex stomach tube and graduated bottle, 250ml capacity
- Suitable for feeding the correct amount of colostrum to large lambs without refilling

Single (Code 0040)

Colostrum Feeder (includes syringe & orange latex tube)

- Used for feeding colostrum to lambs
- 60ml metered syringe to help administer feeds quickly and gently

Single (Code 0041)

Spare Latex Tube

Single (Code 0042)

Colostrum Feeder (includes syringe and plastic tube)

- Used for feeding colostrum to lambs
- 60ml metered syringe to help administer feeds quickly and gently

Single (Code 0474)

Spare Plastic Tube

Single (Code 0288)

Non-Vac Bottle

- Large, 500ml, polycarbonate bottle complete with teat, collar and extra wide neck for easy filling
- Extra tough to prolong life and calibrated for accurate feeding
- Sterilise by boiling

Single (Code 0005)

Non Vac Teats

- Specially designed isoprene teat with unique moulded in vacuum release valve
- Bulbous teat end encourages more rapid acceptance by lambs
- Hollow cone tip allows flow of milk to be regulated

Single (Code 0006) | Pack of four (Code 2353)

Pull-On Lamb Teats

- Superior rubber for supple, strong walls
- Bulbous teat end encourages fast acceptance by lambs
- Hollow cone tip permits milk flow regulation, cut at end for slow flow or nearer base for increased flow
- Fits most household bottles

Colours available:

Single Black (Code 0007) | Single Clear (Code 0168) |

Non-Vac Bottle Rack System

- Innovative multi-lamb feeder for effective rearing of orphan lambs
- Feed one to four lambs simultaneously and unattended
- Coated for long life, the bottle rack system can be fixed to the front of the pen or on hung fences, walls etc
- Comes complete with fixing screws, four non-vac bottles, non-vac teats and collars.
 Ready for use

Single (Code 0004)

Feeder Bucket

- Multi-lamb feeder for effective rearing of orphan lambs
- Up to 10 litre capacity
- Can be fixed or hung to the pen
- Long lasting durable plastic

Four teat (Code 0367) | Six teat (Code 0366)

Cross Cut Spare Teat (for feeder buckets)

Single (Code 0430) | Pack of six (Code 0376)

Disposable Syringe

Single 60ml syringe (Code 0264)

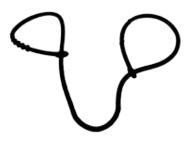

LAMBING REQUISITES

Lamb Puller

- The Lamb Puller is hygienic and manufactured in rubber to be softer and kinder to lambs during birth
- Unlike traditional rope, the lamb puller will not damage or scald the legs

Single (Code 0044)

Lamb Adoption Musk

- Helps to eliminate rejection during fostering by neutralising the natural ewe and lamb odours.
- Apply to both the ewe & lamb

Size available: 6 x 200ml (Code 0011)

Digital Thermometer

- Rapid, easily read and accurate temperature reading (centigrade) of all animals
- Especially useful for diagnosing hypothermia in lambs

Single (Code 0034)

Castration Rings

Antiseptic rubber rings for the castration and tail docking of lambs.

Sizes available: 100 boxed (Code 0037)

500 boxed (Code 0308) | **1500 tub** (Code 1306)

Elastration Pliers

Extremely high quality steel pliers for applying rings when castrating or tail docking.

Single (Code 0012)

Prolapse Ewespoon

Traditional well known product that includes an extra tying position for stability.

Pack of 4 (Code 0032)

Easy Adjust Web Prolapse Harness

- A well-designed harness recommended by D.E.F.R.A for the secure retention of prolapses without the need for stitching
- Simple, secure and hygienic, it can be used in conjunction with prolapse ewe spoon

Materials available:

Single Cotton Web (Code 0151)

Single Nylon Web (Code 0152)

Lamb Macs

- Foul weather kills lambs
- Lamb Macs will help protect against hypothermia by keeping out wet and wind
- Designed to slip over the lamb's head and secured by all four legs for maximum security, comfort and protection

Sizes available:

Red - 100 boxed (Code 6875)

Clear - 100 boxed (Code 6876)

Lamb Sling

- Lamb slings are ideal for weighing or carrying lambs, without crushing the animal
- Sturdy but comfortable cradle with handles, features an industrial-quality, self-locking snap buckle for quick and easy adjustment

Single (Code 0064)

Shepherds Crooks

Seven high quality and robustly designed Shepherd's Crooks.

Sizes Available, packed individually:

- 1 x SC1 LONG NECK alloy tube (Code 0057)
- 1 x SC2 SHORT NECK alloy tube (Code 0058)
- 1 x SC3 LONG LEG solid alloy (Code 0059)
- 1 x SC4 SHORT LEG solid alloy (Code 0060)
- 1 x SC5A Double end combination neck and leg (Code 0375)
- 1 x SC6 LONG NECK Brown coated anodised alloy tube (Code 0062)

SHEARS

Sheep Shears

- Perfectly designed dagging and crutching shears
- Made of quality steel to retain a fine cutting edge

Sizes available:

- 1 x SSOO 3 1/2" Dagging (Code 0144)
- 1 x SS4N 5 1/2" Dagging straight (Code 0147)
- 1 x SS5N 5 1/2" Dagging bent (Code 0148)
- 1 x SS3N 6 1/2" Single bow (Code 0146)
- 1 x SS2N 6 1/2" Double bow (Code 0145)

BREEDING PRODUCTS

Marker Crayons

Sure Sired Marker Crayons.

Rated by the British Wool Marketing Board as the best group of marker crayons in extensive weather tests, Sure Sired Marker Crayons are bright, durable and fully scourable.

- Available in six colours: Red, blue, green, orange, yellow and black
- Available in four different climatic compounds:
 all weather, mild, cold and hot use
- Long life formulation mark more ewes per block
- Presented in robust plastic containers
- Secure holding mechanism within Nettex ram harnesses
- Will not injure the ewe when worn down

Colours and types available, packs of 10:

All weather:

Red (Code 0443) | Blue (Code 0444) | Green (Code 0445) |
Orange (Code 0446) | Yellow (Code 0447) | Black (Code 0448)

Cold weather:

Red (Code 0455) | Blue (Code 0456) | Green (Code 0457) |
Orange (Code 0458) | Yellow (Code 0459) | Black (Code 0460)

Ram Harnesses

Four styles of extremely high quality ram harnesses.

- Sure sired Ram Harnesses are British manufactured at Nettex
- Each harness is designed to deliver strength and comfort without sharp edges that could cut or chafe
- A unique crayon holder design ensures firm, secure crayon retention, and accepts most leading brands

Styles available:

1 x Pedigree cotton harness (extra padded chest strap) (Code 0957)

1 x Cotton anti-chafe(Code 0189)

1 x Leather anti-chafe (Code 0606)

1 x Nylon anti-chafe (Code 0170)

IDENTIFICATION & MARKER SPRAYS

Promark Branding Fluid

A premium sheep branding fluid for professional long lasting identification of sheep & lambs.

- Long lasting, visible and durable, lasts up to 12 months whilst still being fully scourable
- Applied to wet or dry fleeces, colours will remain strong and easily distinguishable
- Apply with a branding iron for most economical application
- Promark branding fluid is British manufactured at Nettex

Colours available, packed in 4's:

Red 2.5 litre (Code 6853) | 5 litre (Code 6849)

Blue 2.5 litre (Code 6854) | 5 litre (Code 6850)

Green 2.5 litre (Code 6855) | 5 litre (Code 6851)

Orange 2.5 litre (Code 6856) | **5 litre** (Code 6852)

Black 2.5 litre (Code 7039) | **5 litre** (Code 7038)

Purple 2.5 litre (Code 7076) | **5 litre** (Code 7075)

Flockmaster Marking Paste

A high quality, consistent, fully scourable marking paste.

- Applied to wet or dry fleeces, colours will remain strong and easily distinguishable for unmistakable identification
- Available in highly visibile colours: Red, blue, green, orange and black

Colours available, packed in 4's:

Red 2.5 litre (Code 0098) | **5 litre** (Code 0103)

Blue 2.5 litre (Code 0099) | 5 litre (Code 0104)

Green 2.5 litre (Code 0100) | 5 litre (Code 0105)

Orange 2.5 litre (Code 0101) | 5 litre (Code 0106)

Black 2.5 litre (Code 0102) | **5 litre** (Code 0107)

All Nettex identification products and marker sprays are manufactured at Nettex in the UK.

Promark

A step forward in the identification market, Promark is a premium, long lasting, fullly scourable, professional marker spray for sheep farmers.

- Available in seven vibrant colours: Red, blue, green, orange, yellow, purple and black
- Available in a 400ml can
- Waterproof, long-lasting yet fully scourable
- Rapid drying formulation
- Works on both wet and dry fleeces
- Guaranteed not to clog when spraying

Colours available; 12 x 400ml:

Red (Code 5174)

Blue (Code 5175)

Green (Code 5176)

Orange (Code 5177)

Yellow (Code 5178)

Purple (Code 5179)

Black (Code 5180)

Marksman

Approved by the British Wool Marketing Board, Marksman marker spray has provided farmers with a reliable stock marking solution for more than 20 years.

- Available in seven vibrant colours: red, blue, green, orange, yellow, purple and black
- Available in a 400ml can
- Weather resistant and fully scourable
- Quick drying formulation
- Works on both wet and dry fleeces
- Suitable for use on sheep and cattle

Colours available; 12 x 400ml:

Red (Code 5160)

Blue (Code 5161)

Green (Code 5162)

Orange (Code 5163)

Yellow (Code 5164)

Purple (Code 5165)

Black (Code 5166)

CALVING COW

Fresh Calver

A palatable supplement for the freshly calved cow to provide energy, calcium and electrolytes.

- The calving period is a critical phase in the lactation cycle
- A successful start for cows and calves is essential
- Calving cows are at risk of dystocia, hypocalcaemia, displaced abomasum and retained foetal membranes
- Fresh Calver provides;
 - ✓ Immediately available energy
 - Electrolytes to aid rehydration post calving
 - ✓ Available calcium to help support increased demand
 - ✓ Vitamin E and selenium help support cleansing

Contains: Dextrose, Whey powder, Calcium carbonate, Sodium chloride, Sodium bicarbonate, Potassium chloride, Magnesium hydroxide.

Administer: Mix 1kg (one sachet) with approx 5 litres of hot water and make up to 15 - 20 litres with cold water, to produce a warm drink.

Size available: 10kg (10x1kg sachets) (Code 6845) | 20kg (20x1kg sachets) (Code 6846)

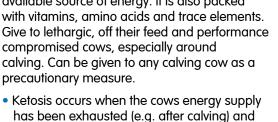

Keto Gold

A glucogenic energy source for reduction of the risk of ketosis.

Formulated to help get cows back on their feet as quickly as possible pre and post calving, Keto Gold provides cows with an immediately available source of energy. It is also packed with vitamins, amino acids and trace elements. Give to letharaic, off their feed and performance compromised cows, especially around calving. Can be given to any calving cow as a precautionary measure.

she mobilises body fat reserves to combat

- this energy deficit • Fat enters the blood stream where it is transported to the liver for processing. This method of energy production produces
- ketones as a by-product, resulting in ketosis and the classic 'pear drops smell' • Fast acting Keto Gold provides support for performance compromised cowscows by providing vital sources of energy

Contains: Propan 1, 2 diol, cane molasses, vitamins and minerals.

Administer: 360ml

Size available: 4 x 1 litre (Code 7554) | **1 x 2.5 litre** (Code 7555)

Features	Advantages	Benefits
Propylene glycol (glucose pre-cursor)	Rapid improvement in energy status	Supports reduction of the risk of ketosis
Cane molasses	Palatable Additional energy source	Easy administration
Nicotinamide (niacin pre-cursor)	Supports liver function	Helps support liver recovery
Biotin	Maintains blood sugar levels when carbohydrate intake is low	Helps support cow recovery
Vitamin E & selenium	Antioxidant activity	Helps support immune status
Methionine	Increased supply of first limiting amino acid for milk production	Helps support milk production

CALF COLOSTRUMS

Calf Colostrum

An easy mix colostrum blend sourced from Johne's, IBR and EBL free herds.

Formulated for new-born calves to provide nutritional, energy and health support when no or insufficient maternal colostrum is available. Calf Colostrum provides energy protein and probiotics to support health and growth.

Feed when no or insufficient maternal colostrum is available.

- Provides the energy and protein that is in maternal colostrum
- Contains pre and probiotics to help support healthy gut development and function
- A smooth and consistent product that is easy to administer

Contains: Concentrated bovine colostrum, whey protein powder, coconut oil, hydrolysed wheat protein, egg protein, vitamins and minerals.

Administer: 200g in 1 litre of water

Sizes available: 4 x 200g (1 feed) (Code 4762) | 1 x 1kg (5 feeds) (Code 4932) |

1 x 2kg (10 feeds) (Code 4933) | 1 x 5kg (25 feeds) (Code 4934)

Whole Colostrum for Calves

Premium, high energy colostrum for calves with bovine proteins to provide an energy and protein when insufficient maternal colostrum is available.

Sourced from Johne's, IBR and EBL free herds, Whole Colostrum for Calves mimics cow colostrum as closely as possible.

- Calves are born with no circulating antibodies leaving them vulnerable to infection and disease
- Calves rely on the intake of high quality colostrum from the dam to provide them with the protection they need
- Heifers can produce low quality colostrum as can cows who come into a lot of milk (antibodies are effectively diluted)
- Whole Colostrum for Calves provides a range of nutrients essential for survival

Contains: Concentrated bovine colostrum, whey protein powder, coconut oil, hydrolysed wheat protein, egg protein, vitamins and minerals.

Administer: 228g in 1 litre of water

Sizes available: 4 x 228g (1 calf pack) (Code 0482) | 228g (1 calf pack in calf non vac bottle and teat - instant colostrum for calves) (Code 1226)

Features	Advantages	Benefits
High energy	Supports maintenance of body temperature	Helps support calf survival
Concentrated bovine colostrum	Bovine proteins	Helps support immune development and disease resistance
Egg protein	Quality soucre of protein	Helps support calf health/survival
Easy mixing technology	Smooth consistent product	Easy to administer
Pre/pro biotic	Supports healthy gut development and function	Helps support calf health

CALF NUTRITION

Roto-Corona Plus

A complementary feed that helps support the newborn calf's natural defences against the challenges of life.

Roto-Corona Plus provides newborn and transported calves with highly concentrated digestible energy and bovine administering at times of stress

proteins to help get them off to a great start. Ideal for such as transport.

 Administering one Roto-Corona plus syringe soon after birth can help support natural defences to the challenges life

Contains: Coconut oil, corn oil, egg protein, dried bovine colostrum, whey protein and vitamins.

Administer: 1 x 30g syringe

Sizes available: 3 x 30g syringe (Code 3952)

Features	Advantages	Benefits
30g feed	High inclusion of: Energy and protein	Help maximise support
Concentrated, digestible energy	Available energy when most needed	Best start possible Help support recovery from stress/travelling
Bovine proteins	Help support immune development	Help support natural defences
Egg protein	Quality soucre of protein	Helps support calf health/survival
Vitamins A,D,E	Immune supporting vitamins	Helps support calf health/survival

Calf Kick Start

A rapid energy boost for weak, small and unthrifty calves.

When calves are struggling give them a boost with Calf Kick Start. Calf Kick Start is a source of energy and nutrients for unthrifty, sick and scouring calves. Calf Kick Start is ideal for weak newborns struggling to stand. Ideal for use in newborn calves through to 3 months old.

- Calves that don't stand and suckle (dam or bottle) soon after birth are at risk
- Easy to administer Calf Kick Start helps get calves up and suckling vigorously, quickly

Contains: Propan 1, 2 diol, cane molasses, vitamins and minerals.

Administer: 30ml

Size available: 1 x 240ml (8 calf size) (Code 0632)

Features	Advantages	Benefits
Propylene glycol (glucose pre-cursor)	Rapid improvement in energy status	Helps support calf survival
Cane molasses rapidly fermentable,	Palatable energy source	Elevates blood glucose Easy administration
Biotin	Maintains blood sugar levels when energy intake is low	Helps support calf recovery
Vitamin E & selenium	Antioxidant activity	Helps support immune development
Nicotinamide (niacin pre-cursor)	Supports liver function	Helps support calf efficiency

Nutri-Scour 5 in 1

For the stabilisation of water and electrolyte balance during diarrhoea.

With its 5 in 1 premium formula incorporating natural fibre from psyllium husks to absorb water and electrolytes to restore fluid and salt balance in the small intestine, Nutri-Scour helps restore gut health quickly.

- The result of scours in calves is inevitably dehydration
- The consequences of dehydration include reduced feed intake, a weakened immune system and in severe cases death
- Feeding Nutri-Scour at the first sign of scours will rehydrate and help restore gut health
 - ✓ Electrolytes sodium, potassium and chloride to help restore electrolyte balance
- ✓ Energy facilitates sodium and therefore water absorption from the gut through the inclusion of dextrose (glucose)
- ✓ Alkalising agent helps reverse acidosis through the provision of an alkalising agent (sodium bicarbonate)
- ✓ Psyllium gelling agent to coat the inflamed intestine wall and help slow the passage of fluid through the intestine, helping to resolve diarrhoea quickly
- Pre and Probiotics helps support healthy re-colonisation of the gut with the aid of pre and probiotics.

Contains: Dextrose, Psyllium husk, Maltodextrin, Sodium bicarbonate, Sodium chloride, Trisodium citrate, Potassium chloride.

Administer: 100g of powder in 2 litres of warm water, twice daily.

Size available: 1 x 1kg (10 calf feeds) (Code 7021) |

1 x 2.5kg (25 calf feeds) (Code 7022)

Hydra-Scour

Nettex Hydra-Scour is indicated for calves. In case of risk of, during periods of, or recovery from digestive disturbance (diarrhoea).

This 3 in 1 oral rehydration formula contains energy, electrolytes and an alkalising agent to help resolve diarrhoea quickly.

- Calves suffering from scour will dehydrate quickly
- An effective and easy to use oral rehydration product is a must on all farms

At the first signs of diarrhoea feed 2 litres of prepared Hydra-Scour solution twice daily for at least 2 days. If milk feeding is to be continued, ensure a 3 hour gap between electrolyte and milk feeding.

Contains: Dextrose, Sodium chloride, Sodium acetate, Potassium chloride, Monoammonium phosphate

Administer: 100g of powder in 2 litres of warm water, twice daily.

Size available: 48 x 100g sachets (Code 7615)

CALF FEEDING & HUSBANDRY

Calf Feeder Bottle and teat (non vac system)

- 1.5 litre ridged polycarbonate bottle suitable for microwave sterilising
- Quality non-vac rubber teat designed for calves and other large livestock
- Neck size also accommodates lamb non-vac teat

Single (Code 1205) | Teat for calf feeder bottle single (Code 1225)

Calf Feeder Bag

 Robust 2.5 litre bag with a stomach feeder tube in a clear, sterilised, Euro slot holder bag

Single (Code 3925)

CATTLE VITAMIN & MINERAL DRENCHES

Cobalt & Vitamin B12 Drench

Unlock performance potential with this specific trace element and vitamin supplement for cattle and sheep.

- Large areas of the UK are cobalt and selenium deficient, practices such as liming and pasture improvement have exacerbated this situation
- Cobalt is essential for growth and development of young stock and has important implications in ruminant fertility
- Animals deficient in cobalt and selenium will substantially under perform
- Cobalt, Selenium and Vitamin B12 drench also contains additional vitamins A,D,E and B1 for added performance potential
- Cobalt, Selenium and Vitamin B12 should only be fed to animals requiring an additional source of these elements

Contains: Propan 1,2-diol, cane molasses, amino acids, vitamins and minerals.

Administer: Lambs: 6-12 weeks, 1ml | 3-6 months, 2ml | Mature, 5ml Administer: Calves: 4+ weeks, 5ml | Yearlings, 10ml | Mature, 15ml

Sizes available: 4 x 1 litre (Code 3495) | 4 x 2.5 litre backpack (Code 3496) |

1 x 5 litre backpack (Code 4761)

Cattle Drench

Packed with nutrition, Cattle Drench is a high specification vitamin and mineral drench for calves, yearlings, cows and bulls.

Specifically formulated to give cattle much needed nutrition at key times of year. Cattle Drench provides an immediately available source of energy, vitamins, amino acids and trace elements to help support health and yield.

- Forage provides a large proportion of the diet of many cattle and is often lacking in essential minerals and trace elements
- Imbalances and deficiencies of minerals and trace elements can have adverse effects on live weight gains and fertility

- Drench calves/yearlings to help support liveweight gains
- Administer to cows to help counteract calving stress and weight loss
- Administer to bulls to help support energy, condition and fertility

Contains: Propan 1, 2-diol, cane molasses, vitamins, amino acids and minerals.

Administer: Calves: 1-3 months - 15ml | 3-6 months - 20ml | 6-12 months - 30ml | Yearlings - 40ml | Cows/Bulls - 60ml

Sizes available: 4 x 1 litre (Code 3485) | 4 x 2.5 litre backpack (Code 3486) | 1 x 5 litre backpack (Code 4768)

UDDER CARE

Udder Wipes

Formulated to disinfect, soothe and help support the condition of sore and cracked udders and teats.

- Use for the hygiene of the teats and udder before attaching milking plant, as part of a mastitis control plan
- Use one udder wipe per cow, having first removed any heavy contamination from the teats

Contains: Glycerol, chlorhexidine and alcohol.

Sizes available: 1 x 1000 refill (Code 1141)

Features	Advantages	Benefits
Glycerol	Emollient to support skin hydration	Helps promote softer more pliable skin, helping minimise damage to teat ends
Chlorhexidine	Antibacterial properties	Helps support maintenance of healthy teats
Quick Drying Preparation	Teats dry after application	Easy attachment of clusters

Teatmint

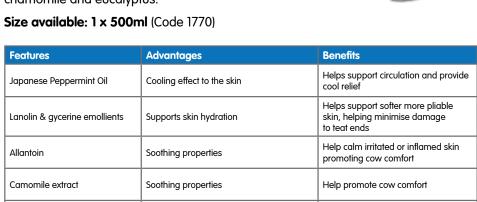

Eucalyptus

A soft, readily absorbed, cool and soothing cream containing 35% Peppermint Oil.

Teatmint contains a range of natural plant extracts known for their soothing properties and supportive effects on circulation and wound healing.

- Mastitis is a painful inflammation of the mammary gland
- Applying a cooling, soothing preparation such as Teatmint to the area will help ease the discomfort the cow feels
- No requirement for milk withdrawal

Contains: Japanese peppermint oil, lanolin, glycerol, allantoin, chamomile and eucalyptus.

Natural disinfectant & insect deterrent

properties

Helps support udder cleanliness

Udder Salve

A high quality, traditional udder salve based on pharmaceutical grade petroleum jelly with added emolliency to support skin condition.

- Massaging the udder with a traditional salve helps soothe and support udder condition
- Salves are especially useful when weather conditions lead to dry, sore or chapped teats
- No requirement for milk withdrawal

Contains: Petroleum jelly, Ianolin and glycerine.

Sizes available: 4 x 1 litre (Code 1751) | 1 x 4 litre

(Code 1752)

Udder Salve with Iodine

Udder Salve is also available with added iodine for its extra disinfection and sanitising effect.

Contains: Petroleum jelly, Ianolin, glycerine and iodine.

Sizes available: 1 x 2 litre (Code 4072)

Features	Advantages	Benefits
Pharmaceutical grade Petroleum Jelly	Emollient, supports skin hydration	Helps support softer more pliable skin, helping minimise damage to teat ends
Lanolin & Glycerine	Emollient, supports skin hydration	Helps support softer more pliable skin, helping minimise damage to teat ends
lodine	Antibacterial properties	Helps support udder cleanliness

Udder Cream

A soft, readily absorbed, non greasy, aqueous barrier cream that supports superior skin suppleness and protection.

- Using an udder cream will provide a barrier to adverse weather conditions and protect and sooth skin
- Udder creams are especially useful when weather conditions lead to dry, sore or chapped teats

Contains: Lanolin, glycerine and alantonin.

Sizes available: 4 x 1 litre (Code 1753) | 1 x 4 litre (Code 1754)

Features	Advantages	Benefits
Lanolin & Glycerine emollients	Emollient, supports skin hydration	Helps support softer more pliable skin, helping minimise damage to teat ends
Allantoin	Soothing properties	Helps calm irritated or inflamed skin

Litter Care

 Concentrated instant energy source designed for use on all piglets immediately after birth

 Instant energy source to help promote aggressive suckling and colostrum intake

Administer: 2ml (one pump) as soon as possible after birth or 4ml (two pumps) for weak and vulnerable piglets.

Size available: 4 x 240ml (120 piglet size) (Code 0480A)

Piglet Kick Start

• Immediate source of glucose, B vitamins, vitamins A, D and E, amino acids and trace minerals

 Ideal for at risk, sick and scouring piglets from birth to weaning

Administer: 2ml (one pump) as soon as possible after birth.

Sizes available: 4 x 250ml (125 feeds) (Code 0637)

Pig Oil

- Provides a lustrous shine for show animals
- Prevents coat staining and helps tackle problem lice

Sizes available: 4 x 2 litre (Code 4481) **I 4 x 4.5 litre** (Code 4479)

Pig Stop Bite

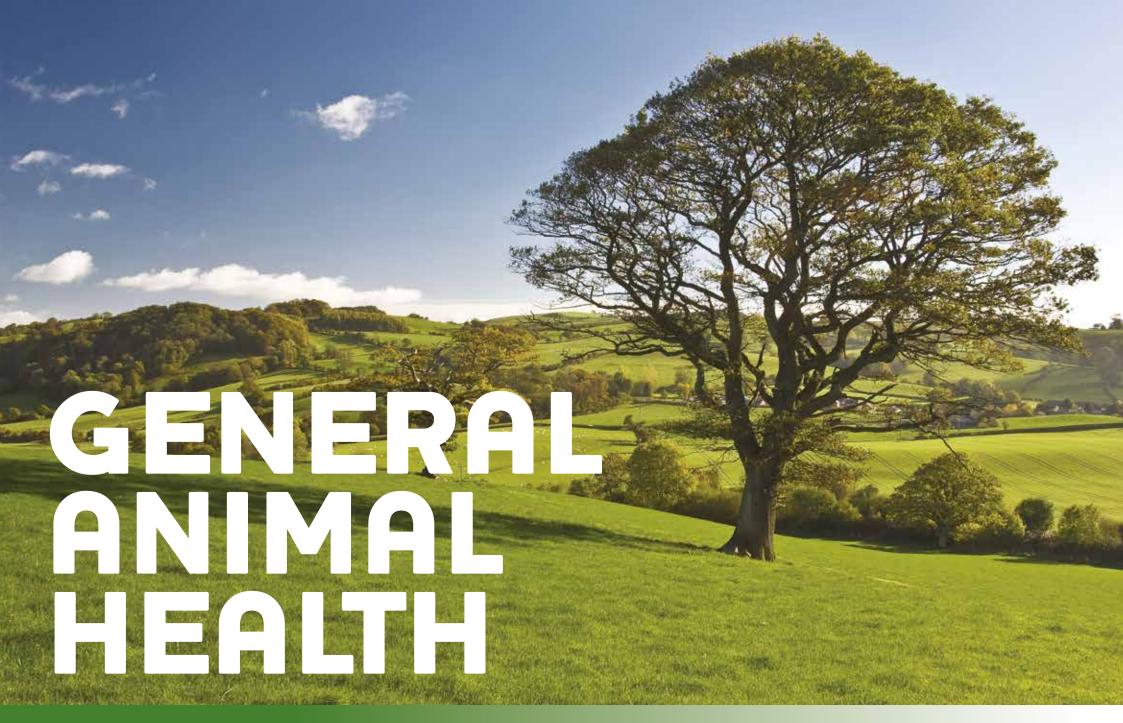

- Antibacterial, astringent, anti-tail biting violet spray
- Sanitises, disinfects and minimises recurring cannibalism
- Contains Denatonium Benzoate the most bitter substance known to man

Size available: 6 x 500ml (Code 1067)

Agri-Gel

- Long lasting lubricating gel which will not dry or flake
- Ideal for obstetric use and pregnancy diagnosis
- Non spermicidal
- Suitable for artificial insemination, as a lubricant, or to be used as a scanning gel

Sizes available: 6 x 500ml flip top (Code 3353 | 6 x 500ml internal spout (Code 0008) | 6 x 1 litre jug (Code 0009) | 4 x 2 litre jug (Code 0010) | 4 x 5 litre jug (Code 1018) | 1 x 25 litre drum (Code 1074)

Veterinary Surgical Scrub

- Fast acting, broad spectrum, antibacterial skin cleansing liquid scrub
- Kind to the skin, and suitable for use all over the body
- Surgical scrub can be used for any application where hygiene is of paramount importance; including veterinary pre and post-operative procedures

Sizes available: 6 x 500ml (Code 0725) | **4 x 2.5 litre** (Code 5049)

Cod Liver Oil

- Naturally rich source of health giving vitamins for all livestock
- High in vitamins and omega oils

Sizes available: 4×5 litre (Code 0611) | 1×25 litre (Code 0720)

Hydrogen Peroxide

Veterinary quality, 20 vol. 6% hydrogen peroxide cleaning and dressing agent.

Sizes available: 6 x 1 litre (Code 0021) | **4 x 2.5 litre** (Code 3363)

Liquid Paraffin

Pure medicinal quality liquid laxative.

Sizes available: 6 x 500ml (Code 0191) | **6 x 1 litre** (Code 0192) | **4 x 5 litre** (Code 0194) | **1 x 25 litre** (Code 0015)

Glycerine

A pure, medicinal quality, liquid.

Size available: 4 x 5 litre (Code 1497) |
1 x 25 litre (Code 1498)

Surgical Spirit

Quality spirit based.

Sizes available: 6 x 500 ml (Code 0626) | **6 x 1 litre** (Code 0627) | **4 x 2.5 litre** (Code 3260)

One Step Shampoo

- Low foaming, easy to use and suitable for all livestock and horses
- Will cleanse and condition the coat, skin and pores to improve condition and appearance
- Contains cosmetic grade ingriedents

Sizes available: 6 x 1 litre (Code 0598) | **4 x 5 litre** (Code 0600) | **1 x 25 litre** (Code 0978)

Pig Oil

- Provides a lustrous shine for show animals
- Prevents coat staining
- Helps tackle problem lice

Sizes available: 4 x 2 litre (Code 4481) | **4 x 4.5 litre** (Code 4479)

IODINES / ANTISEPTICS / DISINFECTANTS

Septiclense Spray

An easy-to-use aerosol cleanser with a powerful antibacterial action. Ideal for application to minor external wounds, grazes or skin punctures in all livestock, including horses.

- Contains antibacterial, natural soothing and drying agents
- Clear formulation does not discolour skin or hair
- Violet formulation allows easy identification of sight of application

Contains: Chlorophen & Chlorhexidene Digluconate.

Sizes available: 6 x Violet 250ml (Code 0361) | **6 x Violet 500ml** (Code 0362) | **6 x Clear 500ml** (Code 0355)

Bactocyde

A ready-to-use, trigger-spray disinfectant with strong antibacterial and antiseptic action.

- Even minor wounds can become severely infected. Use Bactocyde for quick and effective cleansing
- lodine formulation allows easy identification of sight of application and makes Bactocyde suitable for use on navels
- The formulation is kind to skin and suitable for use on all livestock including horses

Contains: Benzalkonium chloride, phenoxyethanol, glutaraldehyde and iodine.

Size available: 6 x 500ml (Code 1110)

Umbilical Spray

- Instant cleansing, broad-spectrum disinfectant for use on umbilical cords in newly born livestock
- Contains antibacterial agents, is rapid drying, and is easily identifiable once sprayed

Sizes available: 6 x 250ml (Code 0363) | **6 x 500ml** (Code 0364)

10% Iodineplus Solution

A spirit based, superior quality strong iodine with 10% lodine active. The preferred choice for drying wounds, umbilicals, etc.

Sizes available: 10% iodine pump spray 6 x 500ml (Code 0625) | 10% iodine 6 x 1 litre (Code 0535) | 10% Iodine 4 x 2.5 litre (Code 3456) | 10% iodine 4 x 5 litre (Code 0536)

Strong Iodine Plus Solution

Spirit based lodine.

Sizes available: Strong iodine pump spray 6 x 500ml (Code 3377) |
Strong iodine 6 x 1 litre (Code 4308) | Strong Iodine 4 x 2.5 litre (Code 3375) |
Strong Iodine 6 x 5 litre (Code 3853)

Protector

- Powerful broad-spectrum disinfectant for livestock housing, equipment and general farm use
- Specifically formulated for farm use and all livestock
- Effective in the presence of high organic soiling

Size available: 4 x 2.5 litre (Code 3588)

Orph Paste

An easy to apply antibacterial topical cream for application to skin lesions.

- Sheep and goats particularly lambs can suffer from a disease characterised by scabby lesions around the mouth and nostrils
- This is commonly seen in young lambs and their ewes and in older lambs in late summer
- This is not usually a severe disease, but the lesions can become secondarily infected

Size available: 4 x 300ml (Code 5584)

SHEEP AND CATTLE FOOT CARE - PREPARATIONS

Footmaster

A concentrated disinfectant spray for use in the maintenance of healthy feet.

- Foot conditions in livestock are not only a health and welfare issue but also have a significant impact on growth and production
- Prompt and effective application at the first signs with Footmaster will help support foot health.

Contains: Chlorophen & Chlorhexidene Digluconate.

Sizes available: 6 x 250ml (Code 0352) | **6 x 500ml** (Code 0353)

Lameless Ready to Use (formerly Derma Phenox)

An on-the-spot, powerful trigger spray application providing a triple level solution to foot health in sheep and cattle.

- Foot rot in sheep and digital dermatitis in cattle are two of the most prevalent and costly foot health conditions on farm
- Application at first sight with the powerful formulation contained in Lameless ready to use, can help provide effective support foot health
- Lameless ready to use incorporates a combination of antibacterial and disinfectant actives to help support maintenance of foot health

Contains: Benzalkonium chloride, phenoxyethanol, glutaraldehyde.

Size available: 6 x 500ml (Code 4923)

INSECTICIDES AND FLY REPELLENTS

Summer Fly Cream

- D.E.E.T. based, non-greasy, readily abosrbed fly cream
- Contains pure lanolin and glycerine to keep skin soft and supple
- Can be used around sensitive areas such as eyes, nose, ears and udder

Size available: 4 x 500ml (Code 1771)

Fly and Wasp Killer Aerosol Spray

- Combines the rapid knockdown of Tetramethrin and effective kill of Permethrin
- High active levels

Contains: Permethrin and Tetramethrin.

Size available: 12 x 300ml (Code 2024)

Dairy Fly Spray

- Insecticide for professional use against flies, midges, wasps, gnats, mosquitoes and other flying insects
- Permethrin based, Dairy Fly Spray will kill insects on contact and is suitable for use in dairies, milking parlours and other farm buildings

Contains: Permethrin.

Size available: 4 x 4.5 litre (Code 4080)

Professional Fly Killer

- Ready-to-use contact killer with residual activity
- Targets species such as, flies, mosquitoes, wasps, ants, gnats, cockroaches, earwigs, midges, beetles, lice, bristletails, silverfish, fleas, moths, mites and ticks
- For use in and around buildings and yards including dairies, milking parlours, animal housing
- Can be used on hard porous and non-porous surfaces

Contains: Tetramethrin and Permethrin.

Size available: 4 x 4.5 litre (Code 2069)

Louse Powder

- Ready-to-use Permethrin based insecticidal powder
- Combines a rapid knockdown and kill with a sustained residual activity
- Especially effective against lice and fleas it will also kill most crawling and flying insects
- For use on hard porous and non-porous surfaces, soft furnishings, pet bedding, skirting boards, inside door frames, animal houses and sheds

Contains: Permethrin.

Sizes available: 4 x 350g Shaker Pack (Code 2013) |

1 x 3kg Tub (Code 2066)

Fly and Maggot Killer Aerosol Spray

- Powerful, fast acting insecticidal spray formulated to kill most flying and crawling insects
- Safe for using in food preparation and livestock areas, it destroys flies, mosquitoes, blowfly and maggots

Contains: Tetramethrin, Permethrin, d-Phenothrin and Pyrethrums.

Size available: 6 x 450ml (Code 0603)

Strike Plus Aerosol Spray

- Effective blowfly repellent
- Combination of two fly repellents, an antibacterial action to clean and disinfect minor wounds, and easily absorbed oils and lanolin's to provide repellent action whilst helping sooth irritation
- Each application leaves a weather resistant film

Size available: 6 x 250ml (Code 0602)

Total Mite Aerosol Spray

- Specifically blended Permethrin based formulation that not only kills common mites but once applied to outbuildings all migrating mites are accounted for
- Effective on all mites commonly found in farm buildings

Sizes available: 6 x 250ml (Code 0663) | 6 x 500ml (Code 0664)

Terminal Fly and Insect Killer Aerosol Spray

- Food-safe aerosol insecticide for use in dairies, kitchens and other food preparation areas
- High quality formula targets pests including flies, wasps, mosquitoes, moths, fleas, lice and cockroaches

Size available: 6 x 400ml (Code 4153)

ANIMAL HANDLING

Anti Kick Bar

- High quality, stainless steel
- Fully adjustable
- Easy to fit

Single (Code 6943)

• Spare springs and caps available

Single (Code 6945)

Bull Holder

- Stainless sprung steel
- 11cm

Single (Code 6944)

Bull Ring

- Copper construction
- Self piercing
- 21/2" and 3" available

2½" Single (Code 6951) | **3" Single** (Code 6952)

Rope Halter

- Traditional style sturdy rope for sheep and smaller animals
- White

Single (Code 0345)

Cotton Halter

- For large animals
- White

Single (Code 0195)

Cattle Hobbles

Substantial pair of cattle hobbles used for limiting the spread of the hind legs.

- Made from very strong cotton web, fully adjustable with anti-chaff inners for comfort
- Joined by a length of heavy gauge chain or fixed cotton

1 x cotton web with chain (Code 0199) 1 x heavy duty (Code 4079)

FOOT TRIMMING

Hoof Cutter

- Forged steel Construction
- Designed for heavy duty use
- 40cm
- Soft grip handles
- Interchangeable blades

Single (Code 6954) | 1 x set of spare blades (Code 6973)

Foot Rot Shears

- Forged steel construction with serrated blade
- Lockable handle catch
- 24cm

Single (Code 6949)

Myti-Lyte Mark 2 (lamb foot rot shear)

- Multi use, lightweight foot shear is designed for small hands
- Narrow pointed blades reach hard to access areas

Single (Code 0988) | Spare spring single (Code 0408)

Myti-Lyte Mark 3

New ultra sharp mini-serrated blades in straight or offset designs.

Single straight foot rot shear (Code 3876) Single offset foot rot shear (Code 3877) Spare spring single (Code 0408)

Foot Paring Knife

- High quality knife with shaped surgical steel blades ideal for foot paring
- High visibility plastic handles with a textured finish allow greater handling and control

Single half curved (Code 0035) Single lamb foot (Code 0036)

Abscess foot rot knife

- High quality, stainless steel foot-rot knife with a curved retractable blade
- Suitable for paring and removing abscesses in infected hooves

Single (Code 0182)

Hoof Knife Double Edge Blade

- High quality stainless steel
- Comfort grip wooden handle

Single (Code 6955)

Hoof Knife Right Blade

- High quality stainless steel
- Comfort grip wooden handle

Single (Code 6956)

Hoof Knife Left Blade

- High quality stainless steel
- Comfort grip wooden handle

Single (Code 6957)

NEEDLES AND SYRINGES

Balplex Veterinary Syringe

- Clear lure lock
- 10ml and 20ml available

10ml Single (Code 6950) | **20ml Single** (Code 6971)

Disposable Syringes

- Terumo three part disposable veterinary syringe
- Packed in 100's
